in the coefficient, I use 2nd order to produce two notch

6. see the file Lab7_6_kwc305.py

The different of the flanger and the phaser is that: flanger is use the different delay time(LFO) to effect the sound, while phaser is to use different allpass filter coefficient to produce different sound with notch effect. Besides, flanger will create like a comb filter— periodic waveform output while phaser is not periodic.
